

**Verified Unity Version:** 2019.4.2f1

## Installation

1. Open up your Unity project and navigate to your assets folder

2. (I suggest you create a new folder for ImportedAssets if not already done) Right click and choose Import package => Custom package...

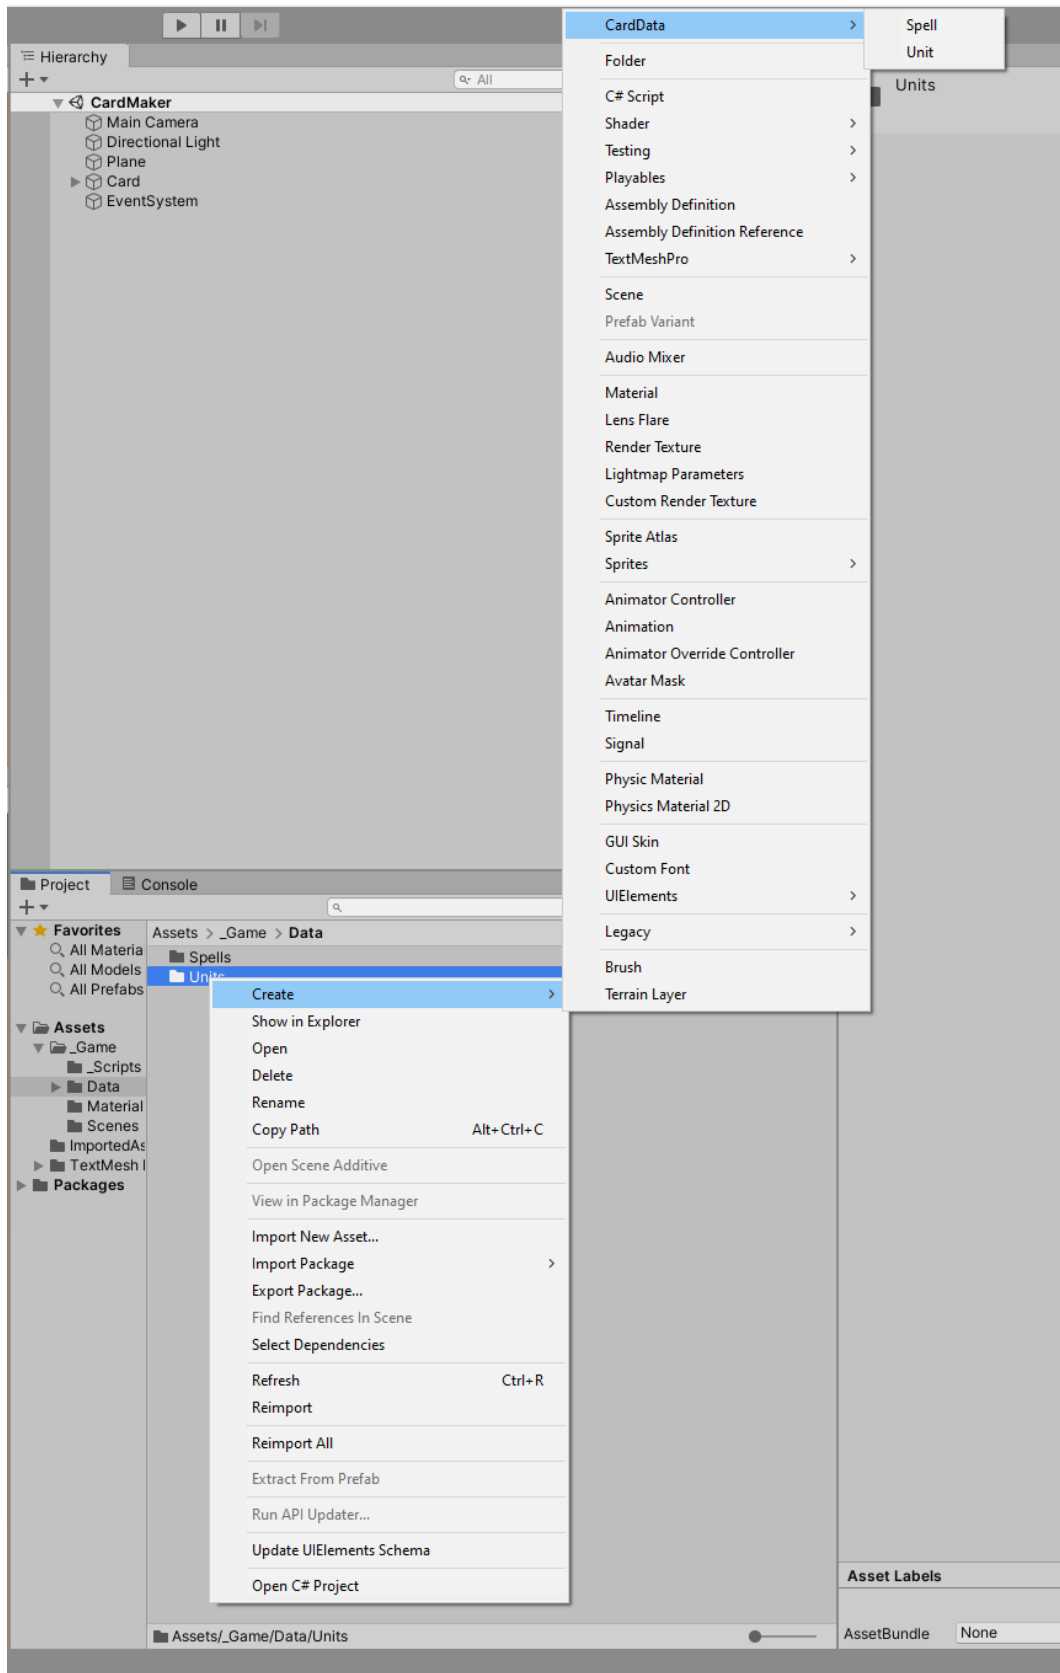

3. Select the card-template package (card-template.unitypackage) and load it

## Tutorial

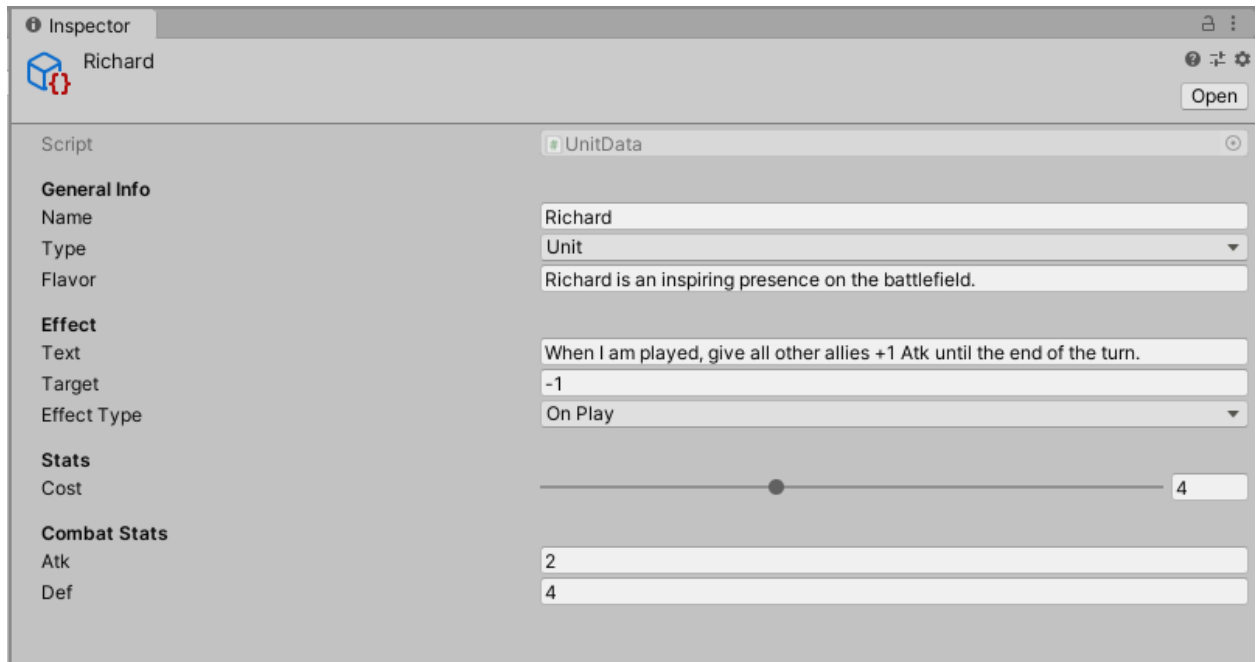

1. Open up the CardMaker scene

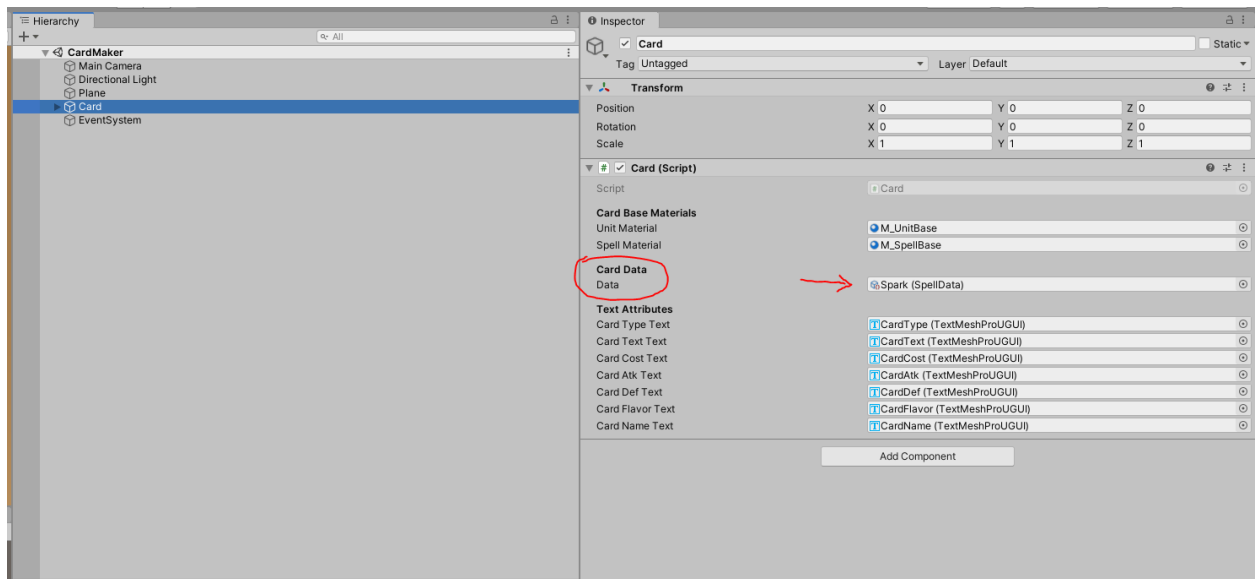

2. When you want to create a new card, right-click inside of the Project's File Explorer and choose Create => CardData => whatever Card type you'd like to make

- Fill in all of the fields of the card

- To test the card, drag the created Card ScriptableObject into the Card in the CardMaker scene, into the slot that says "Data"

- Press Play and see how the Card updates
